

# THE HOOVER DAM

ON TOP OF YOUR NETWORK

## SINGULAR SECURITY

We Provide  
**Peace**  
of Mind:

- Demonstrate regulation compliance
- Monitor network availability and traffic
- Provide a single view of technology environment
- 24/7 remote infrastructure support
- Reduce risk of data loss, virus attacks, and security breaches

### ActionPAX™ Advanced Network Monitoring

Singular Security understands the importance of business continuity in today's demanding business environment. We understand how critical it is to your business to have a comprehensive security monitoring service across the network, systems and applications.

Why? Because IT monitoring will demonstrate regulation compliance, monitor various aspects of your network to maintain the health state of your network, and reduce the time to detect and resolve issues. Most importantly, the Singular Security system monitoring service will help you achieve all this at 60% less than traditional tools and solutions.

Singular Security's Advanced Network Monitoring is designed to assist clients in maintaining and supporting their IT infrastructure. These services include expanding previous monitoring capabilities to include systems, applications, routers, switches, hubs, and much more. Our system monitoring service is designed to decrease the amount of time spent on day-to-day maintenance tasks that need immediate attention to remotely support client IT infrastructures 24 hours a day, 365 days a year.

Singular Security's Advanced Network Monitoring is offered in a layered approach to give you the flexibility to choose which set of deliverables best meets your specific requirements. Each layer combines 8X5 or 24x7 monitoring, alert management, and a specific set of preventive maintenance tasks that are performed at varying frequencies.

### We make your network secure by anticipating your needs. Tried and true.

- You'll receive 24 X 7 X 365 proactive network management conducted by network engineer specialists.
- Your network uptime and availability is maximized providing business continuity.
- Capabilities include vulnerability scanning, patch assessment, intrusion monitoring and firewall monitoring to consistently let you know the health of your network.
- Asset reporting that can be used to demonstrate compliance with regulations like Sarbanes-Oxley, GLBA, HIPAA and other IT governance requirements.
- Performed from an Advanced Network Operations Center (A.N.O.C) inside a fully redundant and state-of-the-art data center.
