

SINGULAR SECURITY

what a superhero cannot offer you, we give you

Significant reduction in time, effort and cost to establish and sustain a standard security configuration baseline.

Eliminate over 90% of all vulnerabilities on workstations and servers.

Translates written security policies into deployable and enforceable security policies.

Deployment of the recommended Security Templates from Microsoft, NSA or NIST.

Automated, 24/7 monitoring & enforcement of security policies.

Create custom security policies/configurations to meet unique security needs and changing threats.

Prove to compliance auditors that your security policies are monitored and enforced.

Policy Compliance ActionPAX™

We automate and streamline security policy enforcement to improve IT efficiency and network security. Policy Compliance ActionPAX™ is the first security policy management solution to deliver both detailed and high-level summary views of policy compliance with functionality to automate security policy enforcement. In very simple terms, computer security policies are sets of configuration and access controls that determine who can do what on any given computer. Your organization can establish the same security configuration baseline recommended jointly by Microsoft, the National Security Agency (NSA) and the National Institute of Standards and Technology (NIST).

And you thought a super hero's car was nifty
Wait'll you see our features.

Next Generation Security Configuration Management Services

SINGULAR SECURITY

THE Policy Compliance ActionPAX™

Comes fully equipped...

Compliance Status Summary

Have a summary of the compliance state of each managed computer across all policies and show auditors that you have real-time, continuous enforcement of security policies and configurations on all your workstations/servers

Comprehensive Security Policy Knowledge Base

Tested security settings and policies designed to support US Federal network security requirements and key Administrative, Physical and Technical Safeguards required in such regulatory laws as SOX, GLBA, HIPAA, and PCI.

Continuous Monitoring and Automatic Policy Enforcement

Policy Compliance ActionPAX™ will continuously monitor the status of your policies, detect an out of compliance state and then automatically restore the security policy. Policy Compliance ActionPAX™ will immediately notify administrators of the computer's non-compliant status via e-mail or text message.

Continuous Lockdown

Policy Compliance ActionPAX™ will allow you to easily and quickly lockdown your systems. Once locked down, Policy Compliance ActionPAX™ will automatically maintain the lockdown conditions on your computers thus eliminating any "Security Drift".

Off Network Policy Enforcement

Unlike Group Policy, Policy Compliance ActionPAX™ provides policy monitoring and enforcement even if your computer is not connected to the network. This ability acts as a fail-safe system should network connections go down or something or someone tries to corrupt computers that are mobile and connect to the network on an intermittent basis.

Remote Access Security

Policy Compliance ActionPAX™ remediation actions can range from denies access, to quarantine, to automatically remediate and allow access.

Data Protection

Policy Compliance ActionPAX™ can also be used to continuously secure electronic information on your computers by enforcing policies that secure access to files, folders and applications, prevent transfer of electronic information to removable media and automatically log off users after periods of inactivity.

For more information about Policy Compliance ActionPAX™ call Singular Security Sales: (888) 669-1618
